

The Gold Standard: Videonystagmography (VNG) Testing Equipment

Videonystagmography(VNG) is the gold standard test for vestibular pathology and is reimbursed by all major insurance carriers and Medicare. The equipment includes a balance platform, computer and monitor and hardware and software for collecting and reading the

data. Portable computer stands are available separately. VNG tests take about 45 minutes to complete and can be done with a technician in your practice. After receiving the first test interpretive, a proper and accurate diagnosis and treatment plan can be devised.

Active Head Rotation Test (AHR)

The AHR is for both horizontal and vertical head shake rotational testing. Analysis includes gain, asymmetry and phase for both the horizontal and vertical protocols. The AHR uses exclusive infrared technology, which simplifies and shortens the set-up and test time.

Ultra Lightweight Goggle

The Better Balance ENG goggle has been consistently rated by users as one of the most comfortable available. Patients welcome the light weight and clinicians value its compact design, sturdy construction and utility. The Better Balance goggle is the ideal choice for testing, allowing unimpeded head movement.

Intelligent Interface Controller

The Better Balance Intelligent Interface Controller serves as the nerve center, gathering eye movement data and promptly digitizes it for computer processing.

Laptop Computer

The Better Balance system is centered around a fast and reliable laptop computer that provides ample memory, the latest in computer processor technology and a sharp, easy-to-read 15" monitor. The laptop computer delivers excellent, solid performance and trouble-free operation.

Intuitive Software

Better Balance's Windows-based custom software is both powerful and transparent. Users find that it enhances their ability to study and analyze eye movements and it also shows the "eye-on-the-screen", rather than a separate video monitor for viewing the patient's eye. The test battery includes all standard ENG tests and enables the user to customize the test protocol and the order of tests to suit their needs.

User-friendly Caloric Irrigator

Easy to use and maintain, the Better Balance Air Caloric Irrigator eliminates the messy clean-up and connection problems that water irrigators present. The unit features variable time and temperature settings and provides precise control of temperature and air flow.
